(a) density of a GPC candidate y_j
parent $p_j = 0.5$
parent $p_j = 2.0$
parent $p_j = 4.0$
density
candidate coordinate y_j
(b) $\Pr(|y_j - t| \le \delta)$
$\Pr(|y_j - t| \le \delta)$
precision δ
GPC, target $t = 0$ (parent $p = 1$)
GPC, target $t = 1$ (parent $p = t$)
additive GPC, target $t = 1$ (parent $p = t$)
bound $2\delta/|t|$ (Prop. 3)
